2. Citations and explanations (Rule 70.7)

The claimed invention relates to a composition to be used in corrosion-preventive paints comprising a non-aromatic epoxy resin, a polysiloxane and an epoxy-silane acting as a cross-linking agent between the epoxy and siloxane chains. The composition has high dry solids content and low viscosity. It can be used to protect steel and concrete surfaces.

Of the documents cited in the search report, the following document will be discussed:

D1 WO 9832792 A1

D1 discloses a composition comprising a non-aromatic epoxy resin, a polysiloxane and a difunctional amine hardener and/or an aminosilane. According to D1, the composition in its cured form is a three-dimensional structure (see page 10 line 37 to page 11 line 21).

The subject matter of claims 1-12 differs from the disclosure of D1 in that an epoxysilane is used as cross-linking agent instead of an aminosilane. There is no indication in D1 towards the use of an epoxysilane. The claimed invention is therefore considered to be novel, to involve an inventive step and to be industrially applicable.
